TITLE : MASTER SWITCH FOR POWER
WINDOW

ABSTRACT : PROBLEM TO BE SOLVED: To make whole constitution small.

SOLUTION: In a master switch 1 for power windows, each window open/ close circuit for individually opening and closing the left and the right windows of the front seat and the rear seat of a vehicle can be alternatively selected by operating one rotation operating knob 3, and consequently it is unnecessary to provide an operating knob for every window open/close circuit, so that the whole constitution may be made small. A lock switch mechanism capable of locking all at once the opening and closing of each of the window open/close circuit is provided in the rotation operating knob 3. Accordingly, it becomes unnecessary to ensure the space of disposing a lock switch, so that the whole constitution of the master switch 1 may be made small.
